

# The Room of the Future

Wall-to-wall innovation

# Engaged patients. Empowered providers.

Today's smart hospital room combines cutting-edge technology and data analytics to deliver a better care experience for all stakeholders.

With pCare's open platform in your Room of the Future, patients are better empowered to engage in their care and collaborate with providers by connecting with care plans and managing non-clinical tasks. Providers can make the most of their limited time by focusing on patient care and continuously practicing at the top of their license.

# New Capabilities. All Connected.

## 1 Voice Controls

Simple Alexa skills allow patients to manage and engage the Room of the Future with voice controls.

## 3 Personal Device

Patients and families can pair their personal devices to pCare making it easier for them to engage with the system while away from home. They can also screencast directly to the room's TV. Bringing critical information and tools right to patients' and caregivers' devices helps activate them in the care journey and fosters communication with providers.

## 5 Tablet

Hospital-supplied tablets can bring advanced controls to the bedside and provide an optimal interface for gaming and web browsing for the patient. Tablets can also be configured to allow patients to access their chart in the hospital's patient portal.

## 2 Room Controls: Lighting

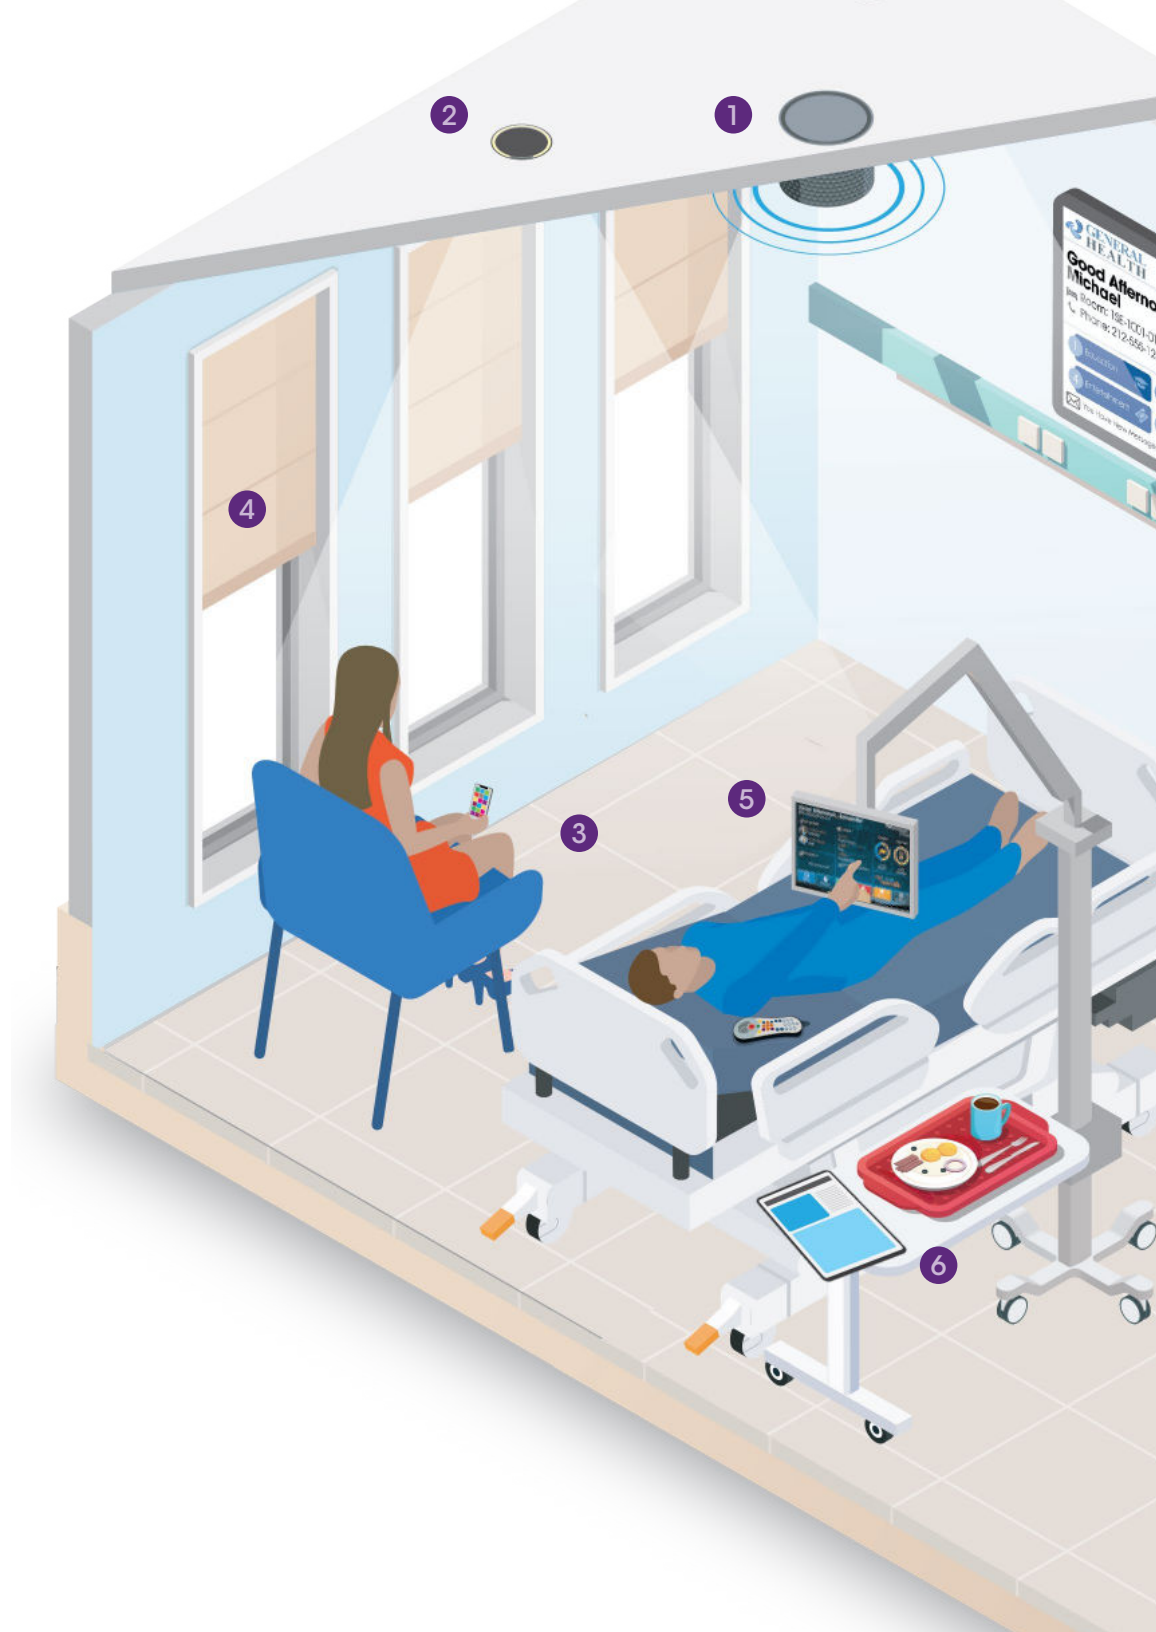

While lighting systems can be programmed to match circadian rhythms, pCare empowers the patient to easily adjust their room's lights to maximize comfort and minimize unnecessary staff calls.

## 4 Room Controls: Blinds

Room Controls allow patients to raise and lower shades, as well as manage the temperature to optimize comfort and enable independence. This enablement also frees staff to focus more time on care, rather than room controls.

## 6 Meal Ordering

Patients can quickly and easily order meals to fit their schedule while maintaining compliance with dietary restrictions and tracking nutritional values.

## 7 Interactive TV

As the hub of the pCare-enabled room, the TV provides entertainment, education on demand, and personalized messaging to on-screen displays to prompt patients for the next best action. Patients can also manage non-clinical tasks from their TV remote pillow-speaker. The TV is built to integrate with your other care systems for a streamlined experience.

## 8 Whiteboard

Digital Whiteboard integrates with the medical record and other hospital systems to present important information for patients, families, and providers that is updated automatically in real time.

## 10 Smart Beds

Smart Beds with sensors that can measure vital signs and patient movements can send alerts to nurse stations and/or patient-facing devices like the TV, Whiteboard, tablet, and personal devices, depending on the issue.

## 9 VideoConnect

VideoConnect uses the interactive TV controlled by the pillow speaker to facilitate telemedicine consults, remote rounding and monitoring, interpretation services, and video visits with loved ones, without the need for additional devices or apps.

## 12 RTLS Integration

With RTLS Integration, staff name, photo, and role appear on the TV or Digital Whiteboard when they enter the room, providing need-to-know information to patients and families before they ask for it. This helps patients feel more engaged and comfortable with providers and improves communication.

## 11 Room Connect

Surface critical patient information to providers as they enter the room, allowing them to immediately focus on the patient. Information is automatically synced to always offer the latest results and notes.

# The Room of the Future is here today.

The entire Room of the Future is supported by the scalable, integrated, open pCare platform. You can start implementing the solutions you need most with the confidence that you can add and adapt to your changing needs in the future. We'll be with you every step of the way.

**Partner with the leader** in integrated patient engagement solutions and start building the Room of the Future in your own facility.
